

hive::models::enums
::operator<<

hive::models::Piece
::toString

hive::models::enums
::toString

```
graph LR; A["hive::models::enums::operator<<"] --> C["hive::models::enums::toString"]; B["hive::models::Piece::toString"] --> C;
```

The diagram illustrates a dependency or relationship between three functions. On the left, there are two white rectangular boxes. The top box contains the text 'hive::models::enums::operator<<' and the bottom box contains 'hive::models::Piece::toString'. On the right, there is a gray rectangular box containing the text 'hive::models::enums::toString'. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating that both the 'operator<<' and 'Piece::toString' functions depend on or call the 'enums::toString' function.
